AI Enablement & Consulting

A two-hour session to find where AI saves your team time

cristiancaroli.com/ai — hi@cristiancaroli.com

Why this reached your desk

Someone on your team thinks AI could save time and wants to know where it helps. Fair question, short answer: the tools are ready, but nobody has mapped which part of the work to hand over. Two hours is enough to get that answer.

What I do

I look at how your team works today, find where AI saves real time, and help you set it up so it holds. No hype, no 40-slide deck, no new platform to adopt.

- **Intro session (2 hours, remote):** I map your current work, answer your questions, and show what is possible.
- **Written plan (optional):** the tools and workflows worth doing, and the order to do them in.
- **Implementation (optional):** I build it, project by project, against deliverables you can see.

What your team walks away with

- A clear read of where the time goes, and what is worth automating first.
- A written plan they can run themselves, with your team, or with me.
- A straight answer, including “not worth it” wherever that is the case.

Why it is low risk

- The commitment is two hours. No retainer, no subscription, no software to buy.
- I do not resell tools, and no vendor pays me. I recommend what fits, including what you already use.
- If AI is not worth it for your business, I will say so. That, too, is a useful result.

Rates

- Intro session, 2 hours, remote: \$120 / €110
- Written optimization proposal (optional): \$60 / €55
- Implementation, per hour (optional): \$80 / €75

Prices exclude VAT/IVA, added on the invoice where applicable.

About me

15+ years in software, currently Director of Engineering at ChessKid (Chess.com). Previously Twitter, Stuart, and ThoughtWorks.

Next step

[Book the intro session online](#), or write to hi@cristiancaroli.com. Scope is agreed before we start.
